(1 of 26)

Common names: big-leaf maple [[Hrusa 2001](#)], bigleaf maple [[Hrusa 2001](#), [PLANTS 2001](#)]

Plant communities: Yellow Pine Forest, Foothill Woodland, Chaparral, Valley Grassland, many plant communities [[Lum/Walker](#), [CNPS](#)]

Habitat: described by Walker and/or CNPS as occurring under moist conditions in streambank and canyon habitats [[Walker](#) and/or [CNPS Inventory 1994](#)]

Wetlands: equally likely to occur in wetlands or non wetlands [[U.S. Fish & Wildlife Svc.](#)]

Elevation: between 0 and 6000 feet [[Lum/Walker](#)].

Acer macrophyllum, a dicot in the family Aceraceae, is a tree that is **native** to California [[Hrusa](#)] and is also found elsewhere in North America and beyond [[Lum/Walker](#)].

Distribution in California based on 1281 Observations contributed to the CalFlora Occurrence Library

Shaded counties indicate at least one observation within the county.

Blue indicates that there is a specimen from this county in a participating herbarium. Specimens have the highest reliability of identification.

Light Blue indicates a documented observation that is vouchered or confirmed by an expert.

Lavender indicates other reported observations that are unvouchered.

Mustard Yellow indicates the county falls within the described species range published in botanical literature
